

***Engineered
for a Lifetime***

Over two decades of development

Born on the Western Plains of Northern NSW, in 1984, Faber Toolboxes were developed to suit the needs of mobile cotton farm mechanics for secure tool storage under Xtreme operating conditions.

The ability to perform under blazing sun, rough driving across corrugated paddocks and levee banks, dust storms and torrential rain, has made our toolboxes the box of choice for Mining, Earthmoving, Contractors, Service Technicians, Farmers and Tradesmen.

A wide range of boxes is available to suit a variety of uses, with many custom-made to individual requirements.

Manufactured in Narrabri, Australia, we produce our unique weatherproof designs in 1.6mm hot rolled steel, laser cut and welded to provide robust construction with no moving parts which could fail.

Once assembled, all boxes are abrasive blasted, powdercoated with a 98% zinc rich primer and finished with a second colour powdercoat, providing a tough, rust resistant finish. Laboratory tests have shown this double powdercoat finish outperforms standard powdercoats under continuous salt spray conditions.

To keep tools and equipment dry in wet weather, we developed

a unique system of drainage gutters and channels on drawered models and have enhanced this system on slope sided drawered models with rain gutters on the lids to divert water away from drawers.

Xtreme versions are available with automotive rubber door seals and additional drainage systems to enable boxes to remain dry inside during pressure washing.

All hardware is chosen to prevent water ingress and for rust resistance. Across the range of toolboxes we use only sealed rivets, galvanised lid hinges with brass pins, zinc coated hasp n staples and stainless steel plate hinges and fittings. Lockable 'click in' handles are used on slope sided models to prevent unlocked latches rattling loose when you're driving along bumpy, corrugated roads while gas struts keep lids open when you're foraging for your tools.

With all this attention to detail it's no wonder that all models are covered by a 20 year warranty and are sought after in a thriving second hand market. All Faber models can be traded regardless of age.

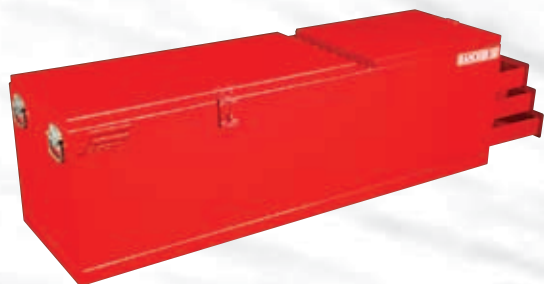

That's why we can proudly boast 'Engineered for a Lifetime'.

Features at a glance

All drawered toolboxes include a central locking pin which ensures that your drawers stay shut.

Some boxes come with lift out trays for storage of small items under the lid.

All drawers are fitted with Stainless Steel Handles affixed with waterproof sealed rivets and are 75mm Deep unless otherwise noted.

Channels are integrated into the front of the drawers to channel water away from your tools.

Most toolboxes are fitted with gas struts to keep the lid open while you forage for tools.

Toolbox lids come with a full length galvanized piano hinge with brass pin, welded at each end to maximise lid strength and security.

Slope sided boxes come with a double folded internal waterproof lip.

Xtreme Dropsider series includes a handy work bench on the fold out tray. There is a 20kg load limit on the workbench door.

Our lockable click in swing handles stay closed when you're driving on the roughest of surfaces.

The Xtreme Toolboxes include rubber seals to seal out both dust and water under pressure.

Stainless steel hinges and fixtures are fitted to all our Xtreme series boxes.

All drawered models are standard with drawer divisions and can be modified upon request. Refer to website for full drawer details.
